

An absence management solution built for growing construction businesses

With the construction industry losing 392,000 workdays over the course of three years due to sickness and injury, it is imperative that construction businesses get a firm grip on employee absences and quickly.

We understand that growing construction businesses need to be fast paced, agile and cost efficient to allow them to continue growing. However, many of these businesses are currently hindering themselves, often using manual processes that are extremely time consuming. A perfect example of this is tracking and booking holidays via paper, spreadsheets and complex email trails. But implementing and using the right technology can help.

The challenges

Wasting time and money on manual processes

Manually logging, approving and tracking absence will be wasting upwards of 100 hours of your businesses time every year.

Poor employee experience

In an industry where over 50% of its workers are offline and remote. Restricting your employees to manual processes will hinder, not enhance their productivity.

No visibility on employee wellbeing

With employee wellbeing becoming more prominent, tracking and monitoring absence and proactively managing employee wellbeing has become more important than ever.

How we can help...

By joining the 1500 businesses already working with e-days you will have access to a cloud-based employee absence system that allows holiday booking, sickness logging, overtime, TOIL and time submissions.

Accessible via any device, anywhere in the world. Using e-days low cost and configurable software will save you time and money, whilst helping your business to grow.
